Security Statement

National Auto Loan Network's (NALN)^{TM} online application system provides a secure environment for customers to submit auto loan applications online. NALN has implemented a number of security measures and procedures, and continues to implement new security technology, to ensure that customers' financial and personal information is kept safe, secure, and confidential at all times.

Website Security
NALN uses the most advanced state of the art hardware and software to protect our customers' personal information when applying on-line. Locations on our website that ask for personal information are delivered through a highly secure server communications layer to our customers' browser via HTTPS.

Encryption
All information transmitted to and from NALN is encrypted through Secure Sockets Layer, in order to make sure that our customers' personal information cannot be viewed by any unauthorized personnel. NALN will have the only means to decode the information once it is received in our database.

Personal Password

To access your personal information or application, customers are required to enter both a unique personal ID. This will safeguard against unauthorized access to all information pertaining to our customer's loan application. Personal IDs are encrypted to optimize security and are only known by our customers. Personal ID information is not accessible by NALN at any time and will never be shared with any unauthorized users.
